SUMMARY

Final-year B.Tech Information Technology student at SVKM's Institute of Technology, Dhule (CGPA 7.31) with hands-on experience across ML pipeline engineering, computer vision, and AI-powered applications. Passionate about building end-to-end data-driven systems; currently self-studying NLP. Seeking data analyst / data scientist roles where analytical rigour meets real-world impact.

TECHNICAL SKILLS

Languages: Python, SQL, Rust (basics), PHP

ML / Data: Pandas, NumPy, Scikit-learn, CatBoost, XGBoost, LightGBM, PyTorch, HuggingFace

Deep Learning / CV: YOLO (v8/v11/26), OpenCV, PyTorch, SAM 3.1, ViTPose

Visualisation: Plotly, Streamlit, Matplotlib

Frameworks: Streamlit, Agno (Python Agents), FastAPI

Dev Tools: Jupyter Notebook, UV (Astral), Git, GitHub, VS Code

PROJECTS

Customer Purchase Intent Prediction System

Python, Pandas, CatBoost, XGBoost, LightGBM, Streamlit, PyTest

Academic Mini-Project (2025–26)

- Built an end-to-end ML system to predict purchase intent from 1.6M+ e-commerce sessions.
- Trained and benchmarked five models with threshold optimisation for imbalanced targets.
- Developed a Streamlit dashboard for real-time scoring and what-if analysis; PyTest unit/integration tested.

Waste Segregation — Two-Stage YOLO Pipeline

Python, YOLOv11m-seg, YOLO26l-seg, OpenCV, PyQt6

Academic Mini-Project (2024–25)

- Designed a two-stage instance-segmentation pipeline for real-time waste classification across 15 categories.
- Achieved mAP50 = 0.925 on final YOLO26l-seg model; benchmarked against YOLOv11m-seg baseline.
- Built a PyQt6 desktop application for live inference and per-category reporting.

Grape Yield Prediction for Vineyards

Python, ResNet50, EfficientNetB0, YOLO26n-seg, YOLO26s-cls

Academic Major Project | July 2026 – Present

- Developing an end-to-end CV pipeline: growth-stage classification → instance masks + keypoint features → geometric volume estimation.
- Integrating temporal (LSTM/GRU) and static regression models for yield estimation (in progress).

EXPERIENCE

AI Research Internship

Completed Sept 2026

InAmigos Foundation

- Researched AI trends, emerging technologies, and tools using reliable online sources to identify relevant industry developments.
- Synthesized research findings into concise summaries, reports, and presentations, communicating key AI insights effectively.
- Gathered actionable insights for AI-related projects and participated in team meetings and training sessions to support project objectives.

Data Analytics Virtual Experience

Completed Jun 2026

Deloitte (via Forage)

- Built an interactive Tableau dashboard visualising machine downtime across factories and device types.
- Analysed employee compensation data to identify pay-distribution trends and flag potential equity issues.

Quantitative Research Virtual Experience

Completed Jun 2026

JPMorgan Chase & Co. (via Forage1)

- Built a natural-gas price estimator using linear regression with seasonal adjustments on historical price data.
- Prototyped a storage-contract profitability model covering injection/withdrawal schedules, volumes, and costs.
- Predicted loan-default risk with Random Forest and LightGBM; engineered DTI/LTI features; compared on ROC AUC.
- Designed an automated FICO-to-credit-rating bucketing system deriving optimal boundaries from historical defaults.

EDUCATION

SVKM's Institute of Technology, Dhule

Currently Pursuing

B.Tech in Information Technology — Dr. Babasaheb Ambedkar Technological University

CGPA: 7.31 / 10.00

Vidya Wardhini Arts, Commerce & Science College

Feb 2023

HSC — Maharashtra State Board

64.83%

CERTIFICATIONS & ACHIEVEMENTS

- **Forage Virtual Experiences (Jun 2026):** Deloitte — Data Analytics; JPMorgan Chase & Co. — Quantitative Research.
- **Google × Kaggle:** 5-Day AI Agents Intensive Course — Capstone Hackathon participant.
- **Spoken Tutorial Platform (IIT Bombay):** Python 3.4.3.
- **Internshala (2024):** Programming with Python.
